

A serene winter landscape featuring a snow-covered path that curves through a forest. On the left, a rustic wooden fence with three rails is partially covered in snow. The trees are bare and heavily laden with snow, creating a soft, white atmosphere. The ground is a smooth, undisturbed blanket of snow.

Global Cobrand Cards Acquisition Testing Playbook

Cobrand Card Analytics
FY 2025

Global Cobrand ACQ Testing Playbook Overview

OBJECTIVE

This A/B testing playbook compiles and summarizes outcomes from global cobrand card acquisition (ACQ) test & learn initiatives, including A/B tests and direct deployments* across Marriott digital (web/app), email and direct mail (DM) channels.

FRAMEWORK

Cobrand ACQ test & learn initiatives are categorized into 3 types – Channel, Offer, and Targeting Optimization, respectively. This playbook includes a one-pager for each completed initiative with the key objectives, results, recommendations, and deployment updates/plans.

This playbook also includes A/B testing guidelines and best practices of experiment design. The below list includes the Primary KPIs** which are typically used as success criteria for test analysis and recommendations for all Cobrand ACQ initiatives:

- ❑ Click-Through Rate (CTR) = Clicks / Digital Impressions (or Unique Visitors)
- ❑ Card Application (APP) Rate = Applications / Unique Visitors (or Digital Impressions or Emails/DMs Delivered)
- ❑ Card Acquisition (ACQ) Rate = Acquisitions / Unique Visitors (or Digital Impressions or Emails/DMs Delivered)
- ❑ Approval Rate = Applications / Acquisitions
- ❑ Customer ACQ Rate using indirect post-view attribution = (Acquisitions recorded within a pre-determined time frame after cobrand offer engagement) / (Customers with at least 1 cobrand offer exposure in tested channel during the test period). This metric is used in lieu of the ACQ rate for certain targeting tests, if direct attribution through Bank URLs isn't feasible/available.

** Direct deployments may be assessed using pre/post analysis or by benchmarking vs. relevant audiences or campaigns.*

*** For certain cobrand digital tests, additional non cobrand KPIs may also be measured (for e.g., bookings, enrollments, etc.).*

Introduction to A/B Testing

What is an A/B test?

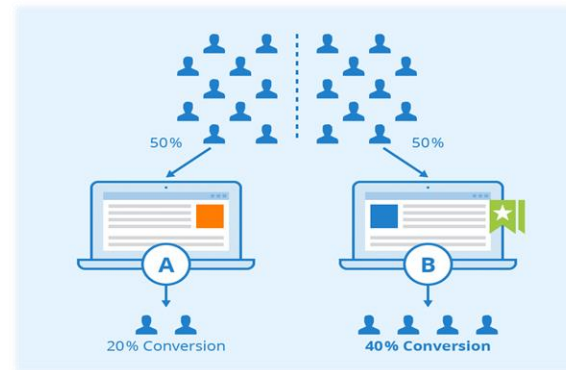

- A/B testing is a strategy used to make data-driven decisions by comparing two variations of one component.
- The test variant (or “recipe”) is measured by using statistical analysis to compare key performance metrics vs. the default variant (or “control”).

Why A/B test?

- Isolate a specific change and measure the impact of that change.
- Minimize the impact of all other factors – same conditions for both test and control.

When to use A/B test?

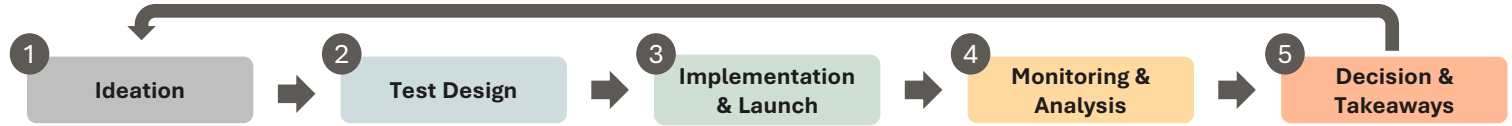

- There is enough audience traffic/volume to assess performance outcomes.
- The immediate impact of a change needs to be determined.
- There is a risk of negative impact from the component being changed.
- Other factors can be (somewhat) controlled.

Best Practices for Cobrand ACQ Test & Learn

- ✓ **A well-designed A/B test allows to measure incrementality of a new/updated component vs. the control** (e.g., new Cobrand ACQ offer, redesigned merchandising creative, repositioned placement, new targeting model etc.) through a true random split of users exposed to each recipe. **Alternative solutions including pre/post & benchmarking are NOT always reliable to isolate the true incremental impact of a change** and can only provide a directional read on performance.
- ✓ Each recipe in an A/B test should ideally **only change ONE variable** vs. the control, while **maintaining audiences within each recipe for the entire duration of the test** to ensure effectiveness of the test setup.
- ✓ **Highly recommended to use unique/new Bank URLs (i.e., bank tracking codes) for all test recipes including control** to get a clean read on the ACQ impact from the test; re-purposing existing URLs is generally not recommended to avoid misleading results.
- ✓ **Especially for audience tests, customer-level full funnel tracking is preferred** (MI & Bank) to allow for further segmentation, i.e., the MI side can track list of customers included in the test, split by recipe. Once the test is complete, the bank needs to provide the list of customers who acquired a card through the test.
- ✓ **The A/B test duration depends on the number of recipes, eligible audience volume, baseline ACQ rate, active in-market card offer, and test launch timeframe.** A MINIMUM duration of 2-3 weeks for digital tests and 2-3 drops/waves for email tests are required (and is the general norm for most US cobrand tests). Longer durations (extending through multiple months), additional email drops or larger audience volumes will likely be needed for a statistically significant read depending on the actual test, and it's recommended to do a custom audience sizing/test duration calculation for each test.
- ✓ **For a meaningful stat. sig. read**, most (US cobrand) A/B tests should be able to detect at minimum 20%-25% lift to cobrand acquisitions between each recipe. This criteria may vary based on the actual test.
- ✓ Generally, the **primary success criteria is Card ACQ rate**, however secondary metrics (Card APP rate, CTR, Approval rate etc.) may be used for additional analysis. Direct bookings/room nights & overall revenue impact may also be considered for digital channel optimization tests.
- ✓ Additional considerations may vary on a case-by-case basis and are typically handled during the test design phase.

Global Cobrand ACQ A/B Test Lifecycle

Duration	Depends on Test Content	1-2 months	2-6 months	1-4 weeks	2-3 weeks
Steps Involved	- Business Need - Bank / Channel Requirements - Learnings (or Follow-ups) from Past Tests - Test Prioritization	- Audience Sizing & Test Duration - Tentative Test Period (Launch & End Dates) - Audience Strategy - Success Metrics - Measurement Plan - Decision to Run A/B Test or Directly Deploy	- Test Recipe Development - Launch Plan Finalization - Audience Preparation - Bank Approval - Test Launch	- Post-Launch Monitoring - Early Read - Data Pulls / Sanity Check - Test Analysis - Insight Development	- Test Results & Recommendations Readouts - Decision to Roll-out / No Roll-out or Follow-up with Additional Testing - Roll-out Planning
MI Core Teams	- Cobrand/Continents - Digital/Channel Partners	Card/Digital Intelligence	- Digital/Channel Partners - Orchestration - Cobrand/Continents - ADS - Creative Agency	Card/Digital Intelligence	- Cobrand/Continents - Digital/Channel Partners - Card/Digital Intelligence

2025 Completed Global Cobrand ACQ Initiatives Summary

In 2025, we ran 22 test & learn for US cobrand card acquisitions across MI web & app, email, and direct mail channels (outside of broadscale LTO & BAU offers), resulting in 5 winning outcome. Additionally, cross global markets, initiatives such as App AJO, Wi-Fi Modal, Res Confo Modal were implemented, driving positive outcomes during LTOs.

	A/B Test Initiatives	Status	Deployed Initiatives	Status
Q1	US Chase Boundless Other Digital Property Wi-Fi Modal Back-test	Complete	US Chase App Home Screen Takeover Modal (AJO) Campaign on Home & Trip	Deployed
	US Chase Boundless BAU App Non-Res Path Combo App LP A/B Test	Complete	UAE, Mexico App Home Screen Takeover Modal (AJO) Campaign	Deployed

US | Chase | Boundless | Other Digital | Property Wi-Fi Modal Back-test

Test from Jan 30 – Mar 5, 2025 | Readout in Mar 2025

Test on Property Wi-Fi Portal Page | Anonymous visitors and members | Chase Boundless Card

OBJECTIVES

- Adding a cobrand offer modal to the Property Wi-Fi portal page post connect landing page will drive cobrand acquisitions without negatively impacting engagement with the portal page. This modal was launched in 2024 and was back-tested to ensure no harm to portal page metrics.

TEST RESULTS

- During the testing period, the Property Wi-Fi cobrand modal acquired:
 - Banner (both test & control group): 66 Apps, 18 NAAs
 - Modal (only test group): 2199 Apps, 401 NAAs
- Assuming minor cannibalization from banner, **Estimated yearly incremental NAAs from Modal:**
 - if launched for full year (120 days LTO +245 BAU days): +2.9K ~ +4.2K**
 - If launched only during LTO periods (120 days): +1.4K**

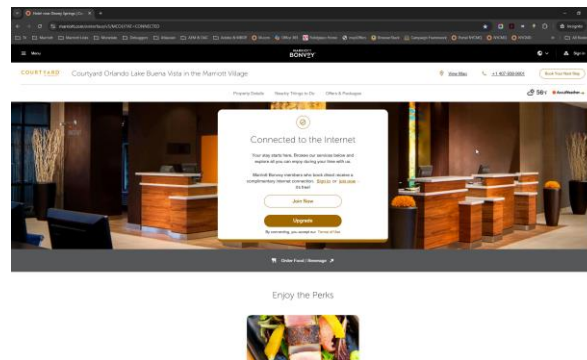

RECOMMENDATIONS / DEPLOYMENTS

- Recommended to launch the Property Wi-Fi Modal to maximize card acquisitions if there are no other significant impacts on booking metrics or engagement to the portal page

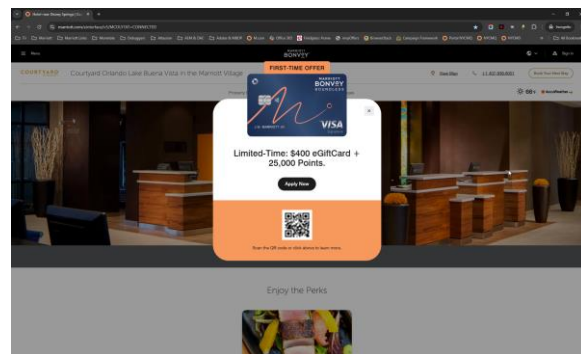

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: [WF52991_52976 Wifi Portal Page Cobrand Modal.pdf](#)

Control Recipe: No Cobrand offer modal is displayed

Test Recipe: Cobrand offer modal is displayed

US | Web FOC page | FOC Comparison page Test

Test from Feb 5 – Mar 5, 2025 | Readout in Apr 2025

Test on Web FOC page | Anonymous visitors and members, exclude paid search | All cards

OBJECTIVES

- Test effectiveness of FOC with comparison page (providing customers with the ability to select and compare credit cards side-by-side) vs. FOC with no comparison page

TEST RESULTS

- FOC with Comparison Page improves customer experience and **stat. sig increases overall ACQ rate by +18%**, mainly driven by Chase cards.
- With FOC comparison page launched to 100% traffic, **estimated annualized incremental NAAs are +2.6K to +3.9K**.
- However, the FOC ACQ baseline significantly dropped in 2024 and continues to decline in 2025 despite an increase in FOC UVs. Even with the launch of the FOC comparison page, the baseline isn't expected to return to 2023 levels.

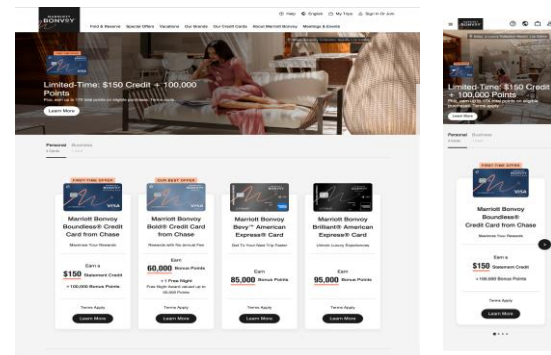

RECOMMENDATIONS

- Recommend launching the FOC Comparison Page as it has a positive impact on overall acquisitions
- Continue testing and developing FOC and seeking other optimization opportunities

FOC Comparison Page

US | App | Q1-2 Home Screen Takeover Modal (AJO) Campaigns

Activated during selected time (see [Appendix](#)) | Readout in July 2025

Activated on App Home Screen/App Acct Trips | Member Audiences | All US Cards

OBJECTIVES

- Temporarily launch cobrand offers through App Home /App Account Trips Screen Takeover (AJO) placement over selected periods to boost cobrand acquisitions. This placement is not used as a dedicated co-brand placement.

LAUNCH RESULTS

- App AJO Takeover Campaigns in 25Q1-2 **resulting in 819* incremental NAAs from 68 days of activation**, majority from Chase Boundless
- Chase performance vs. 24Q1-Q2: daily NAAs drop by **-3 NAAs** and ACQ% is flat. The daily NAA drop mainly driven by soft performance of Chase 25Q1 LTO, Q2 BAU+ offer

RECOMMENDATIONS / DEPLOYMENTS

- Recommended activating AJO App Home Screen Modal at least during Chase LTO periods.

ANALYSIS DECK

- Detailed data: [Appendix](#)
- Card Intelligence Team: N/A

*NAA count includes all five cobrand cards (inclusive Bold X-sell from Chase Dual LP). Chase RAF and Amex Brilliant/Bevy is still TBD, pending on bank report. June Prearrival data is undercounted due to Chase reporting issue, will be updated once Chase report gets fixed

US | Web FOC | Two-cards design A/B Test

Test in Apr21 - May 8 (plan to launch till May14) | Readout in May 2025

Test on Web FOC | Anonymous/Remembered | All Cards

OBJECTIVES

- Test the effectiveness of two card designs on the FOC page vs. the original four-card design

TEST RESULTS

- Test recipe (two cards) showed stat. sig/directional negative impact to Bold, Bevy, SMB cards, and drives overall ACQ% directionally dropped by -15%*.
- No significant improvement has been observed for Boundless and Brilliant (even excluding directional read for Brilliant on FOC body)

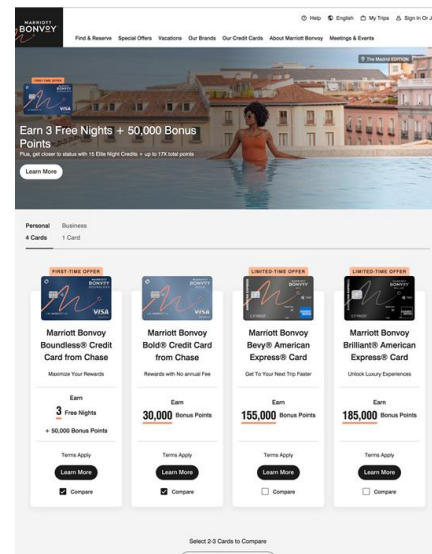

RECOMMENDATIONS/ DEPLOYMENTS

- Recommend early terminating the test as it caused a notable drop in overall ACQ and no obvious improvements were observed for Boundless/Brilliant, which potentially will impact digital goal achievement.
- Test was early terminated on 5/8

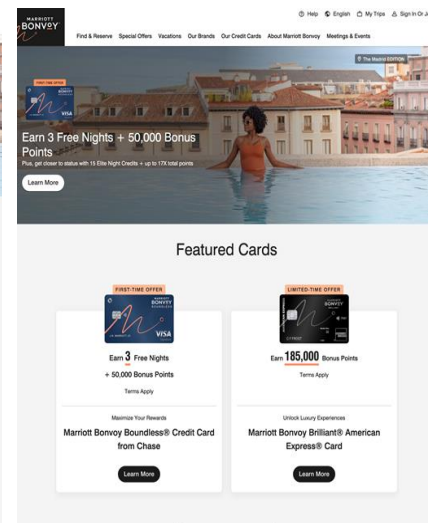

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: NA
- Card Intelligence Team: NA

Control: Four cards design

Test : Two cards design

* Early read result based on 4/21-5/2 data, no further analysis due to early termination of the test

*Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significantly difference

US | Chase | Web Respath | Rate List Menu (RLM) Reactivation A/B Test II

Test in Jun30-Jul 21 | Readout in Jul 2025

Test on Web Respath RLM placement | All customers | Chase Boundless Card

OBJECTIVES

- Test the effectiveness of new bottom banner on the RLM page vs. the control (no RLM placement)

TEST RESULTS

- RLM placement in test recipe total acquired 332 NAAs during test period, however majority of the NAAs are internal cannibalized from other respath placements
 - The bank report showed no change in daily run rates pre vs. post-test.
 - Adobe analytics found no significant difference in MI site app rates between control and test groups.
- Potential reasons that drive minor incremental performance:
 - Impact from Res conf modal & strong performance of 5FN non-respath LTO offer
 - Lower CTR indicates a softer design than last year (bottom of the page, transparent call to action button etc.)

RECOMMENDATIONS

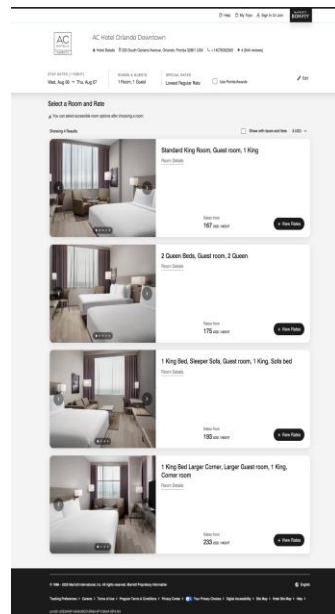

- If there is no impact on booking, recommend to retest during the BAU period
- Redesigning and retesting the RLM placement in the future to optimize its effectiveness.

FULL TEST ANALYSIS DECK

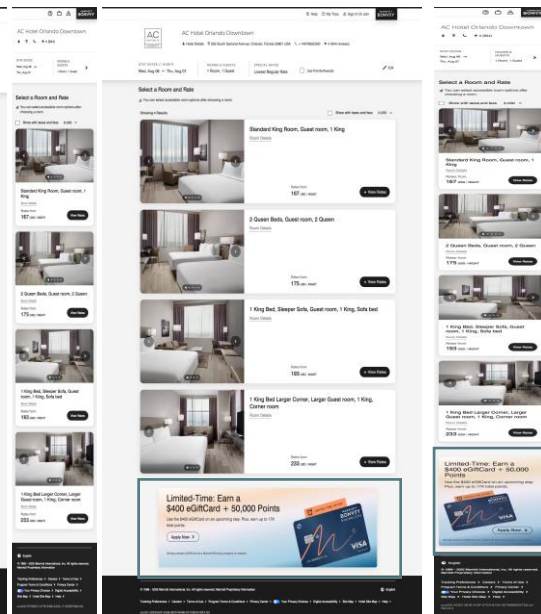

- [25Q3 RLM reactivation test II.pdf](#)

*Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significantly difference

Control: No RLM placement

Test : RLM placement in the Bottom

US | Chase | Digital | Chase landing page A/B/C Test (Launched and Read by Chase)

Test in Jul 31 – Sept 10 | Readout in Sep 2025

Test on Web & App Non-respath Placement | Anonymous/Remembered | Chase Boundless/Bold Card

OBJECTIVES

- Test the effectiveness of two new Chase landing page designs in the non-respath channel
- The test was launched and read by Chase

TEST RESULTS

- Overall, control recipe showed a stat. significantly better performance than the other two recipes
 - Test A vs. Control: APP% **-6.6%**, ACQ% **-10%**
 - Test B vs Control: APP% **-5.6%**, ACQ% **-6.3%**

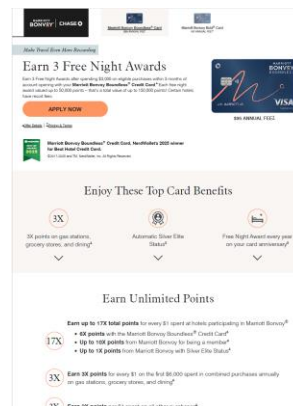

RECOMMENDATIONS

- Continued using BAU experience, which demonstrates significantly higher engagement and ACQ rates compared to new designs

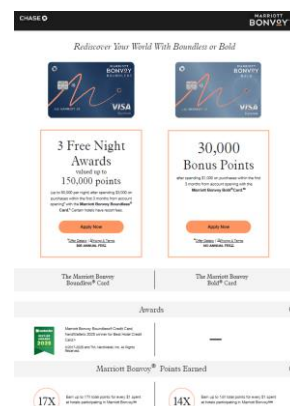

FULL TEST ANALYSIS DECK

- Chase Final Read Deck: [Landing Page Test Results Final Read.pptx](#)

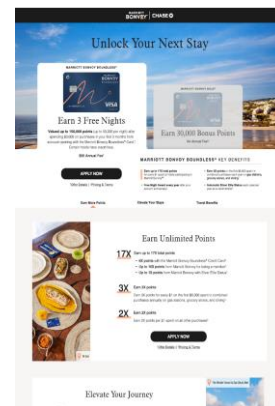

Control: Existing Design

Test A : Dual Card Design

Test B : Control Buster

*Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significantly difference

US | Amex | FOC | SMB Comparison Page Pre vs Post

Launched on Oct 2 | Readout in Oct 2025

Launched on FOC | All members & Anonymous | Amex Business Card

OBJECTIVES

- Add the ability to select the American Express Business card to compare against our other card products

TEST RESULTS

- Adding SMB to the comparison chart led to a directional **+31%** lift** in SMB Adobe App%, primarily driven by FOC BOT and FOC comparison pages
- While overall card applications rate** showed no significant change, there are indications of internal cannibalization, primarily from Chase Bold to Amex Brilliant and SMB

RECOMMENDATIONS

- Recommend launching the SMB Comparison page, as it has a positive impact on overall revenue

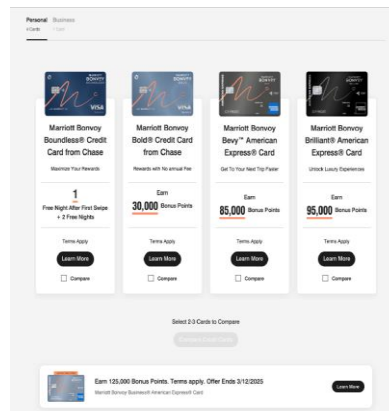

FULL TEST ANALYSIS DECK

- Card Intelligence Team: [25Q4 SMB comp page pre post analysis.pdf](#)

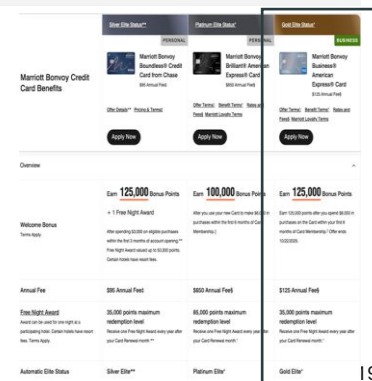

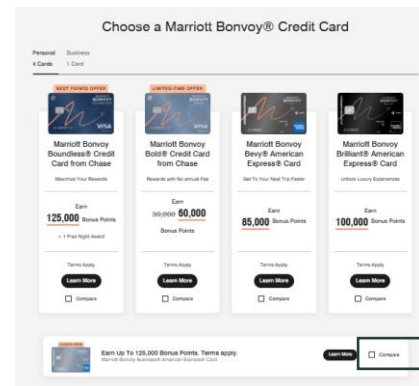

*Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significantly difference

** SMB performance comparison based on pre (9/11-10/1) vs post (10/2-10/22), overall cards/individual cards performance comparison based on pre (9/25-10/1) vs post (10/2-10/8). All performance comparisons based on Adobe application data

Pre-launch:
Only 4 consumer cards can be compared

Post-Launch: Enable SMB to compare with other cards on the comparison page

US | Chase | Boundless | App Non-Res Path | Combo App LP A/B Test

Control Recipe: Click "Learn More" -> Dual card landing page -> application page

Test from Jan 9 – Jan 22, 2025 | Readout in Jan 2025

Test in App Non-Res Path | All Mobile Audiences | Chase Boundless Card

OBJECTIVES

- Test effectiveness of the combo landing page with "apply now" vs. control in App Non-Res Path.

TEST RESULTS

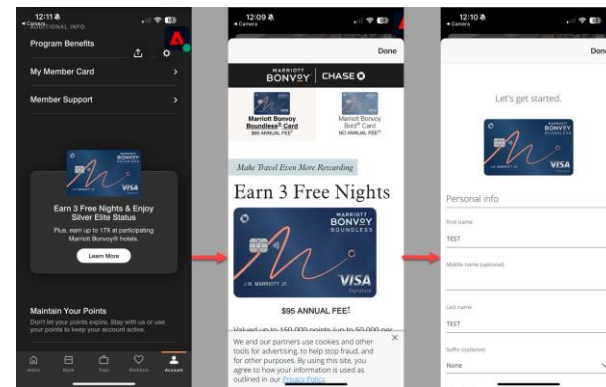

- Test recipe (Combo app) showed a stat. significant decrease in overall (Boundless +Bold) APP rate (-9%) & ACQ rate (-14%),** mainly as customers were only able to apply for the Boundless card in test recipe vs. dual card landing page in the control recipe that allowed for Bold cross-sell
- Despite an increase in Boundless card applications in the test recipe, overall revenue still dropped vs. control.
- Annualized incremental NAAs are -0.7K to -1.4K with the test recipe launched to 100% traffic**

RECOMMENDATIONS / DEPLOYMENTS

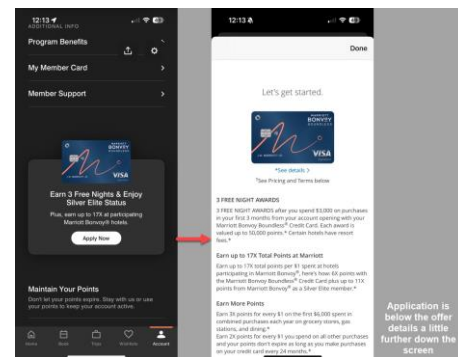

- Recommend not launching the test recipe given the negative impact to the overall Chase card acquisitions and revenue.

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: NA
- Card Intelligence Team: [2025Q1 App nonrespath combo App Test Result.pdf](#)

Test Recipe: Click "Apply Now" -> Boundless only landing/ application Combo Page

US | App Non-Res Path | Home Screen Benefit Expansion A/B Test (R1)

Test from Sept 5 – Oct 22 | Readout in Nov 2025

Test on App Non-respath Homepage | Member only | Chase cards

OBJECTIVES

- Test the effectiveness of the new app homepage benefits banner's expansion ability by showing additional benefits information within the native app experience about the LTO offers.

TEST RESULTS

- The new homepage expansion increased the first CTR on cobrand banner to expand the benefits by **+42%** vs. control, driven by varied subtitle messages on the test banner. However, with 75% drop-off rate after reviewing expanded benefits then clicked 'learn more' to apply, ACQ% showed up as flat (**-2%**) for total cards on the test vs. control.
- Additionally, App% decreased gently (**-5%**) in the test vs. control, primarily due to Bold.
 - Bold:** App% dropped **-15%** along with +2pts in Approval Rate in the test group, likely driven by Boundless-specific messages on both the first and expanded benefits banners which reduced click-throughs to the dual landing page.
 - Boundless:** No significant impact on App% and a slight increase in Approval Rate (+1pts) in the test group.
 - NAA's mix between two cards remained the same.

RECOMMENDATIONS

- Recommend continuing with the control recipe, given a potential impact to Bold app% from the test recipe.
- Consider future tests on BAU offers with varied subtitle-messages on the banner, different content/creative on expanded banner, etc.

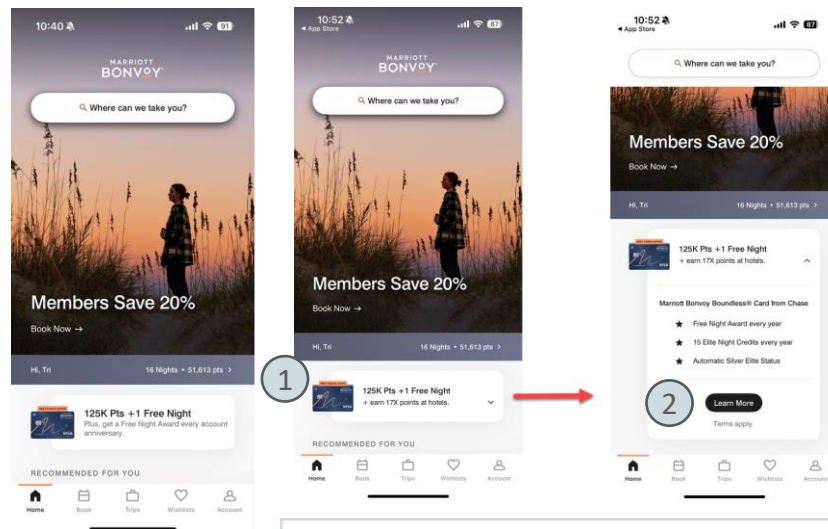

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: [iOS Cobrand Benefits Banner Test Readout](#)
- Card Intelligence Team: [2025Q3 App HP Benefit Expansion Test.pdf](#)

*Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significant difference

Control: Existing Design w/o Expansion

Test : New Design with Expansion

Key differences between test and control experience:

- Add a second click to expanded benefits banner before the landing page.
- Test banner shows varied messages on the subtitle 'earn 17X points at hotels.'

US | App Non-Res Path | Home Screen Benefit Expansion A/B (R2)

Test from Dec 11 – Jan 7 | Readout in Jan 2026

Test on App Non-respath Homepage | Member only | Chase cards

OBJECTIVES

- Re-test the app homepage expanded benefits, focusing on different look and feel design for the banner at the collapsed state between control and test.

TEST RESULTS

- The test variant delivered a statistically significant increase in CTR of **+37.1%**, consistent with prior test in round 1. This indicates that customers were more likely to click the redesigned collapsed banner vs. control as the same context are showing this time.
- Despite stronger engagement on the first banner, the expanded view continued to show about 75% drop-off, mirroring the previous test. Overall, while engagement improved meaningfully at the top of the funnel, the high post-expansion drop-off constrained the impact on full funnel conversion.
- The acquisition rate showed a directional lift of **+11.2%** along with a +2pp increase in approval rate for the test group vs. control.

RECOMMENDATIONS

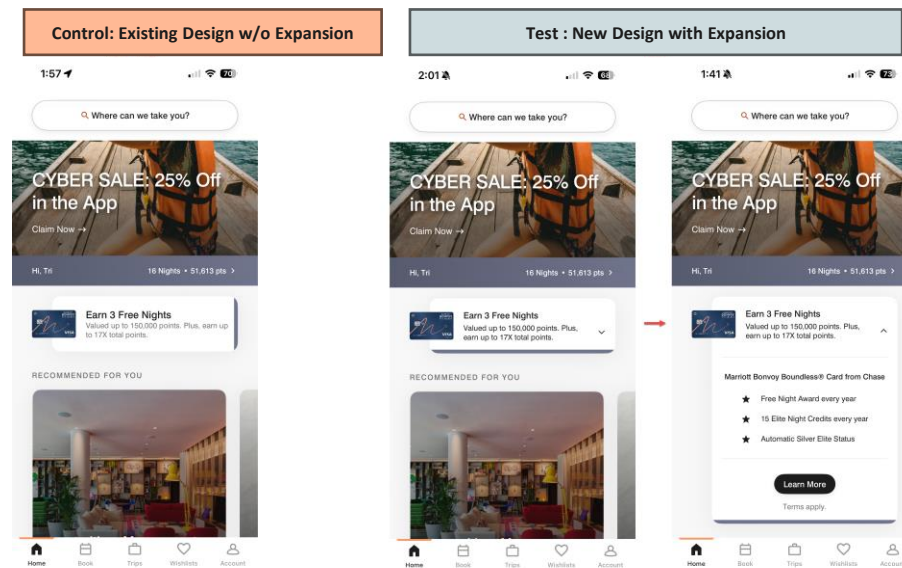

- No statistically significant differences for card acquisitions, visitor conversion, or enrollment. The test banner is recommended primarily for its CTR advantage, additionally, future optimization efforts on enhancing the expanded banner.

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: [App Home Screen Cobrand Banner](#)

*Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significant difference

US | App Res Path | Review Reservation Details Animation A/B Test

Test in Oct 23 – Nov 5 | Readout in Nov 2025

Test on App review reservation details placement | Member only | Chase Boundless

OBJECTIVES

- Test the effectiveness of the new animation design for review reservation detail (RRD) placement on App Res Path.

TEST RESULTS

- No significant differences for APP Rate & ACQ Rate** were observed across the 3 test groups.
- Test B's animation design showed the highest CTR, with a statistically significant increase of **+21%** vs. the control group.
- Despite the higher CTR, Test B's APP Rate remained almost flat (**-0.2%**), and its ACQ Rate showed only a directional increase (**+3%**) compared to the control group.

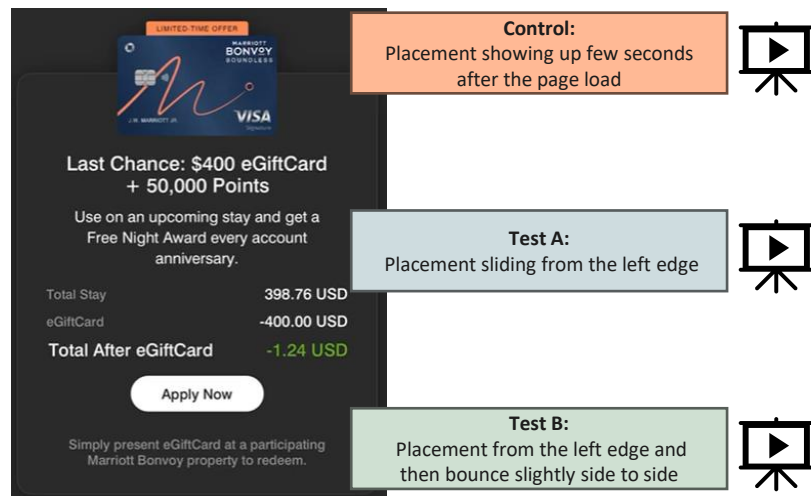

RECOMMENDATIONS/ DEPLOYMENTS

- Select either Control or Test B design according to cobrand outcomes.
- Consider implementation effort and reservation impact when making a final decision.

Test B recipe is chosen to deploy.

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: [App Review Res Screen Cobrand Animation Readout](#)
- Card Intelligence Team: [2025Q4 App RRD Animation Test](#)

Control:
Placement showing up few seconds after the page load

Test A:
Placement sliding from the left edge

Test B:
Placement from the left edge and then bounce slightly side to side

US | Web | HWS Banner Redesign A/B Test

Test from Nov 6 – Nov 24 (early termination)

Test on Web HWS placement on CORE page | Anonymous visitors and members, exclude paid search | Chase cards

OBJECTIVES

- Test the effectiveness of a new design of the HWS banner and relocate it to right below the hero.

TEST RESULTS

- Test was terminated early on 11/24 due to a negative impact to visitor conversion.
- No statistically significant differences** of cobrand KPIs were detected during a 2-week testing period, although CTR in the test was **+46%** higher vs. control, it didn't lead to any stat. sig. differences for the card APP% (**-17%**) or ACQ% (**+4%**).

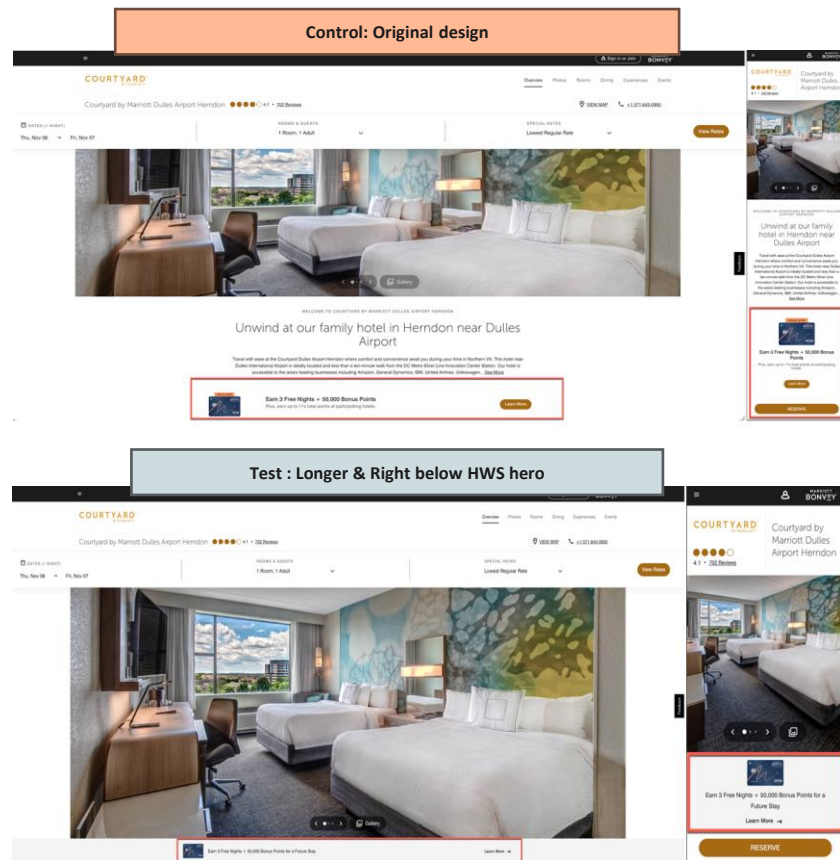

RECOMMENDATIONS

- N/A

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: [DXP-33583 HWS Hero Cobrand Banner.pdf](#)

* **Green** means stat. significantly increase, **Red** means stat. significantly decrease, **Amber** means directionally increase/decrease, and **Grey** means no stat. significantly difference

US | FOC | 5-Card Design A/B Test

Test from Nov 6 – Dec 10 | Readout in Dec 2025

Test on Cobrand FOC page | all US customers | all US Chase & Amex cards

OBJECTIVES

- Test a new design of displaying 5 cards by moving the Amex SMB card from banner & 2nd tab to the top placement on the family of cards (FOC) page.
- In addition, test recipe also highlighted welcome offers' FNAs/points in orange and added a context for annual fee for each card above the 'Learn More' CTA.

TEST RESULTS

- No statistically significant differences** in overall FOC's APP and ACQ Rate for total Amex and Chase cards between test vs. control. CTR for Amex cards was **-10%**** lower in the test, primarily due to the top placements.
- AMEX:** SMB card achieved a statistically significantly higher APP Rate (**+29%****) in the test group, offset by decreases from Brilliant (-9%) & Bevy (-30%**). Amex overall also saw a 5 percentage points increase in Approval Rate compared to control.
- CHASE:** Chase cards in the test group showed a slight **+5%** increase in APP Rate on FOC overall, while Amex cards saw a **-7%** change.

RECOMMENDATIONS / DEPLOYMENTS

5-card design rolls out on 3/12/2026

- Pros: The 5-card design delivered positive results for the Amex SMB card and did not negatively impact overall FOC performance.
- Cons: The new design directionally decreased APP Rate for Amex (-7%). Although it showed a higher Approval Rate during the test that resulted a **+3%** directional increase in ACQ Rate, but we don't know if it would be retained.

US | Web | Reservation Confirmation Modal Redesign A/B/C Test

Test from Dec 11 – Jan 7 | Readout in Jan 2026

Test on Web Res Path Reservation Confirmation | All Customers | Chase Boundless Card

OBJECTIVES

- Test the effectiveness of two new designs of the Reservation Confirmation Modal in the web res path channel.

TEST RESULTS

- No statistically significant differences** observed between either testing group vs. control for card application rate and acquisition rate, while both the Red (+4.1%) and Blue design (+4.9%) showed statistically significant higher CTR vs. control.
- In addition, Blue design had a directionally (+10.3%) higher acquisition rate vs. control with +2pp higher approval rate.

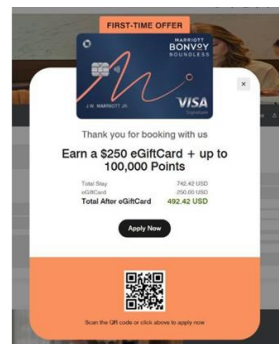

RECOMMENDATIONS

- Recommend to retain the control given flat outcomes on card acquisitions and negative impact to travel insurance purchase.

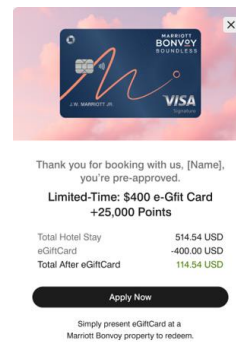

FULL TEST ANALYSIS DECK

- Digital Intelligence Team: [Web Reservation Confirmation Page Cobrand Modal](#)

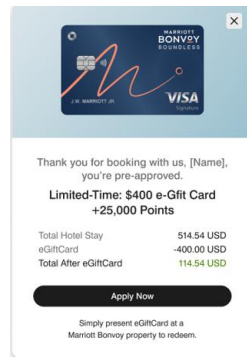

Control: Existing Design

Test A : Pink Background with Cloud

Test B : Blue Background

US | Chase Bank Landing Page | Clickable Hero A/B Test

Test from Nov 17 – Jan 7 | Readout in February

Test on Chase BLP | Visitors from Paid Search | Chase cards

OBJECTIVES

- Test whether featuring a Chase Boundless card offer in the hero improves page engagement and card conversion rates vs. a generic hero with no card offer.

TEST RESULTS

- No statistically significant differences** observed in card application and acquisition rate* between the test and control experiences. Based on the bank report, Boundless hero drove 22 applications and 8 NAAs during the test.
- The hero featuring a Chase Boundless card offer drove a statistically significant increase for the overall page CTR (+6.6%) compared to the control.

RECOMMENDATIONS

- Option 1: Retain the control experience considering the execution efforts as lower funnel performance was flat.
- Option 2: Consider implementing a clickable hero with a featured card offer given the slight increase in CTR for the overall page engagement without negative impact to applications.

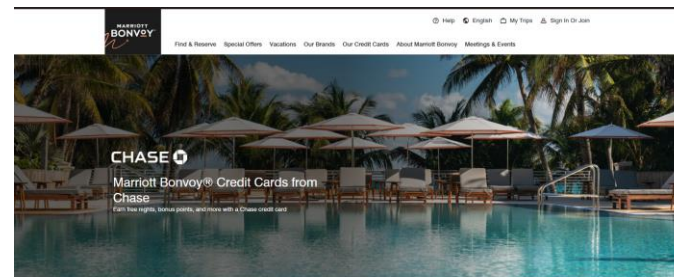

FULL TEST ANALYSIS DECK

- Card Intelligence Team: N/A

* Based on limited applications and instant approvals tracking in Adobe Analytics.

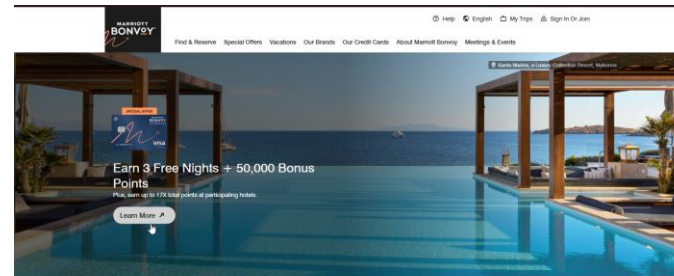

* Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significantly difference

US | Amex | Email | Dual vs. Solo Offer Creative Test

Test Email Drops: Feb 10, Feb 25, Mar 4 | Readout in Mar 2025

Test in MI Email | Selected Non-ECM & ECM cross-sell audiences | Amex Business Card

OBJECTIVES

- Test effectiveness of Solo offer (125K) vs Dual offer (125K vs. 100K + 100SC) MI Email creative for SMB LTO

TEST RESULTS

- Overall, **no stat. significant difference found in APP% and ACQ% between the two creatives** for both non-ECM and ECM audiences
 - Non-ECM: Control 81 NAAs / Test 84 NAAs
 - ECM: Control 220 NAAs / Test 228 NAAs
- Overall approval rate improved in the dual offer creative test recipe, impacted by mixed performance from both featured offers:
 - The richness of 125K LTO was artificially inflated (when positioned next to the 100K + 100SC offer) and in turn attracted higher-quality customers
 - Customers interested in the 100K + 100SC offer appeared to be of lower quality, possibly because they may be seeking short-term benefits (cash back).

RECOMMENDATIONS / DEPLOYMENTS

- Recommend launching either email creative for the short-term and evaluating long-term revenue performance to assess the impact of customer quality
- Consider retesting in the future with dual offers that have similar value to avoid artificial inflation between offers

US | Chase | DM | LTO Creative A/B Test

Test DM Drops: Jun 5 | Readout in July 2025

Test in MI DM | Selected Non-ECM | Chase Boundless Card

OBJECTIVES

- Test the effectiveness of two creatives for Chase Boundless LTO DM

TEST RESULTS

- Overall, Test Recipe (Graphic creative) showed –
 - A stat. sig decrease in App% (-18%)
 - No significant impact on ACQ% (-7%) due to a higher approval rate (+3pp)
 - NAA mix shift from Boundless to Bold by 2%

RECOMMENDATIONS / DEPLOYMENTS

- Recommend remain the Control (Text creative) in DM channel

Test in Email Drop May 20, Jun 9, Jun 25, Jul 17 | Readout in Aug 2025

Test on MI Email | Selected Non-ECM audience | Amex Brilliant/Bevy Card

OBJECTIVES

- Test the effectiveness of Points Math MI Email creative for Brilliant/Bevy BAU+ offer

TEST RESULTS

Overall, no stat. significant difference found in APP% and ACQ% between the two creatives

- Brilliant:
 - Total acquired 567 NAAs (279 control, 288 Test)
 - CTR showed a -3% drop in the test group, but no stat. significant difference was found in lower funnel metrics
- Bevy:
 - Total acquired 391 NAAs (188 control, 203 Test)
 - no stat. significant difference was found in full funnel metrics

RECOMMENDATIONS

- Recommend choosing either of the email creatives based on operational complexity

Control: Non-math mode

Int'l | Web | Review Details placement for Non-eGift/Stmnt Credit offers

Test rollout on Apr 17 | Runs for 8 weeks per market

Test on Web Res Path | All Digital Audiences (Apr 17-May 28), Members only (May 29-ongoing)

OBJECTIVES

- Measure incrementality of adding Review Details placement for Points offer.
- Deploy for all int'l markets except Canada which has Statement Credit offers on Res Path.

TEST RESULTS

- Overall, across markets, performance is favorable for the Review Reservation Detail Placement.
- When comparing to the volume of impressions/clicks, and click-through-rate (CTR) for all web placements activated during the same test time period.
- For most markets, impression volume for Rev Res Details ranked behind homepage hero and banner placements, or in some cases hotel website placements.
- CTR varied, but was generally higher than homepage hero and banner placements.

RECOMMENDATIONS / DEPLOYMENTS

- TBD

FULL TEST ANALYSIS DECK

- DME team: [Intl Web ReviewResDetails Test Readout](#)

The image displays two screenshots of the Marriott website's reservation path, specifically the 'Review Details' section. The top screenshot is labeled 'Creative for Members' and shows a summary of charges for a stay from Friday, August 1, 2025, to Saturday, August 2, 2025, with a total of 351.20 USD. It includes a 'Book Now' button and a 'Room(s) held for 14:52' indicator. Below the charges, there is a section for 'Room Requests and Accessibility' and a 'Summary of Charges' section. The bottom screenshot is labeled 'Creative for Anonymous' and shows a similar summary of charges, but with a 'Send my reservation confirmation by SMS' checkbox and a 'Country/Region' dropdown menu. Both screenshots feature a '60K Points. Representative 53.7% APR Variable.' offer with an 'Apply Now' button.

OFFER OPTIMIZATION

US | Chase | Digital | Irrational Lab Offer Test (3FN vs. 1+2FN)

Test from Mar 6 – Apr 9 | Readout in May 2025

Test in MI Digital | All Web & App Non-Res Path Channel | Chase Boundless Card

OBJECTIVES

- Test the effectiveness of Boundless BAU offer 3FN vs. 1+2 FN in Digital channels

TEST RESULTS

- Web (Ex FOC) and App showed no meaningful differences in application preference between the two offers; Slight shift in approval rates appears to have driven the directional change in acquisition rates
 - Web (Ex FOC) : Overall APP% -1%, Overall ACQ% -9%, Overall AR -2 pts
 - App: Overall APP% +0%, Overall ACQ% +10%, Overall AR +3 pts
- However, on FOC – NAAs dropped by more than half for the Boundless test offer (1+2 FN) compared to 3FN, potentially driven by the offer creative displayed on the FOC page
 - FOC: Overall APP% -52%, Overall ACQ% -54%, Overall AR -1 pts

RECOMMENDATIONS/ DEPLOYMENTS

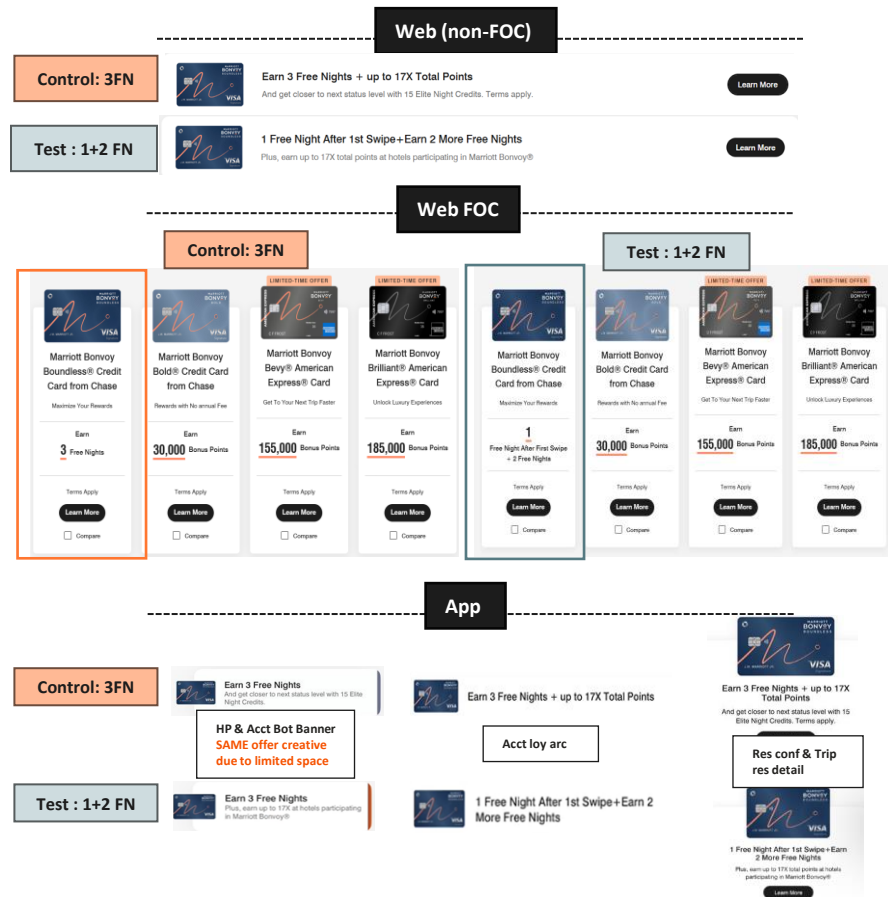

- Web (ex FOC) / App: Recommend retaining the 3FN offer in the short term, while factoring in long-term customer spending behavior for the final decision (follow-up analysis pending customer-level spending data from the bank)
- FOC: Recommend retaining 3FN as the digital BAU champion offer as well, while redesigning the offer creative on the FOC page for 1+2FN (or similar tiered offers) and considering a future retest if needed.

FULL TEST ANALYSIS DECK

- Card Intelligence Team: [25Q2 Chase Irrational Lab Offer Test Result.pdf](#)

* Green means stat. significantly increase, Red means stat. significantly decrease, Amber means directionally increase/decrease, and Grey means no stat. significantly difference

MARRIOTT CONFIDENTIAL AND PROPRIETARY INFORMATION

US | Chase | Email | Irrational Lab Offer Test (75K vs. 1+2FN)

Test in Email Drop Mar 10, Mar 25 | Readout in May 2025

Test in MI Email | All Non-ECMs including non-members | Chase Boundless Card

OBJECTIVES

- Test the effectiveness of Boundless BAU offer 75K vs. 1+2 FN in Email channel

TEST RESULTS

- 1+2FN offer showed stat. sig drop for overall ACQ rate (-20%) vs. 75K in the Email channel, potentially due to the combined effect of the offer effectiveness and email creative
- Both Elite and Basic members responded less favorably to 1+2FN, with Elites in particular showing significantly lower preference for the Tiered offer structure

RECOMMENDATIONS/ DEPLOYMENTS

- Recommend retaining 75K with Math design as the Boundless BAU email champion offer

Test in Jul 24 – Aug 20** | Readout in Sept 2025

Test on Web & App Respath Channel | Members & Anonymous | Chase Boundless Card

OBJECTIVES

- Test the effectiveness of two Boundless EG offer in Respath channel vs. Control Offer
- Control: 250EG + 50K | Test1: 250EG + 50K + AFW | Test2: 250EG + 2FN

TEST RESULTS

- Overall**, Customers favored the Test1 (AFW) offer over the control, whereas the Test2 (FN) offer was less preferred
 - Test 1 vs. Control: CTR -7%, Overall APP% +22%, Overall ACQ% +39%, AR +4pp
 - Test 2 vs. Control: CTR +10%, Overall APP% -2%, Overall ACQ% -6%, AR -1pp
- Majority of NAAs came from Web and App Review details placement

RECOMMENDATIONS

- Recommend launching the Test 1 (250EG + 50K + AFW) offer if there is no long-term impact on customer attrition rate & spend

TARGETING OPTIMIZATION

US | Amex | Business | LTO | Email | SBO Audience A/B Test (High Level Result)

Email drop in Q3-Q4 | Readout in Nov 2025

Test in MI Email channel | Selected non-ECM members | Amex SMB card

OBJECTIVES

- Test the effectiveness of the updated Amex SBO list in MI Email Channel

ANALYSIS RESULTS

- Audience with SBO list showed a directional drop in APP% (-12%) vs. with only the model selected audience
 - Test vs. Control: CTR +3%, APP% -12%, ACQ% +4%, Approval Rate +4pts

RECOMMENDATIONS

- Recommend maintaining the current model-only audience strategy for now and revisiting once the card intelligence team provides a more detailed analysis.

FULL TEST ANALYSIS DECK

OBJECTIVES

Drive Cobrand Acquisition from Push campaign via the Marriott Bonvoy App for Chase/Amex Prearrival offer

- Chase live from 3/10-6/4, 9/25-11/6, non-ECM who are within 48 hrs of an upcoming stay at a Premium or Select hotel
- Amex live from 8/14 – 9/26, non-ECM who are within 48 hrs of an upcoming stay at a Luxury hotel

ANALYSIS RESULTS

- Chase:
 - Only 8 NAA was acquired from 41 applications received over 3 month activation period in Mar-Jun '25. Only 20% of these applications were approved, resulting in 8 NAAs, significantly lower than 38% avg. approval rate for Chase Pre-Arrival offers in Digital channels
 - For Sept-Nov, not enough data due to it living starting at the end of the quarter. Will revisit in Q4 analysis.
- Amex
 - 16 NAAs over 8-week observation period with 45 applications. Notably higher than the 20% avg. approval rate for Chase Pre-Arrival offers

RECOMMENDATIONS / DEPLOYMENTS

- No recommendations due to negligible outcomes; additional observations needed.

US | Email | MAPA ACQ Near Level Campaigns

Live from Q2-Q4 | Readout in Feb 2026

Activated in MI Email | US Chase Boundless prospects within 15 ENC's of next status level
| Chase Boundless Card

OBJECTIVES

- Measure performance of Near Level (NL) Personalized Emails vs. NL Ride-Along Emails in 2025

ANALYSIS RESULTS

- Cobrand Trigger Emails with Near Level Hero messaging featuring Boundless BAU+ offer (75K+50K) drove 765 NAAs from 1K applications.
- 449 NAAs (59%) were driven by NL Personalized trigger emails, while the remaining 316 NAAs (41%) came from Chase ACQ BAU/LTO NL modules.
- Regardless, personalized NL emails with Boundless Points-based offers significantly outperformed emails with NL Loyalty emails (featuring Boundless Free Night offers in ride-along banners) which only drove 51 NAAs throughout FY '25.
- Variances in quarterly contribution are likely tied to differences in email deployment volumes.

RECOMMENDATIONS / DEPLOYMENTS

- Near Level personalized emails recommended to be continued in 2026, given strong evidence of success driven by elevated/personalized NL messaging in all email types – RAB/Standalone/Triggers, but the most volume was driven by solo triggers.

US | Digital | MAPA ACQ Near Level Campaigns

Live from Jul 31 – Dec 31 | Readout in Feb 2026

Activated in Digital Channel | US Chase Boundless prospects within 15 ENC's of next status level | Chase Boundless Card

OBJECTIVES

- Measure full funnel performance of Near Level Digital banners

ANALYSIS RESULTS

- Cobrand Digital Banners with Near Level Hero messaging featuring Boundless BAU in-market offer drove 388 NAAs from 3.4M impressions during Q3/Q4 '25. Similar funnel performance was observed across both activations.

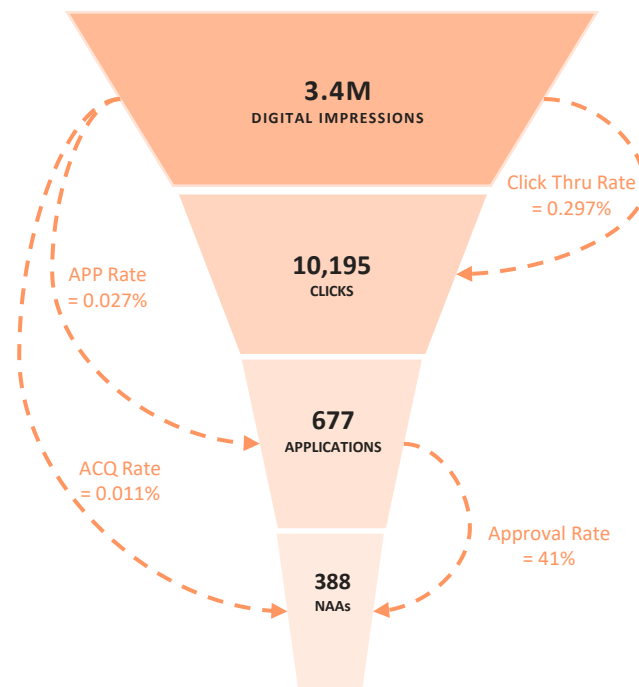

RECOMMENDATIONS / DEPLOYMENTS

- Near Level digital banners recommended to be continued in 2026.

Near Level: Chase Digital Banners Full Funnel Metrics (7/31 – 12/31)

US | Email | MAPA ACQ Abandoned App Retargeting Campaign

Live since Apr 2 (Abandoned App) | Readout in Jun 2025

Activated in MI Email | US MBV member prospects who abandoned their US card application | Chase Boundless Card

OBJECTIVES

- Measure full funnel performance of Abandoned App Emails

ANALYSIS RESULTS

- Cobrand Retargeting Emails were relaunched in April '25 to US MBV member prospects who abandoned their US card application through Res Path* and so far, have only resulted in 9 NAAs from 11.5k emails through 6/25
- In contrast, between Jan-Aug '23, Abandoned App emails were at their peak performance with ~340 Boundless NAAs, suggesting tremendous opportunity for optimization for the current iteration of these emails.

RECOMMENDATIONS / DEPLOYMENTS

- Abandoned App campaigns to be further assessed once reactivated in 2026

US | Chase | Email | Zeta 3rd Party Marketing Email Campaign

Live from May 22 – Aug 19 | Readout in Sep 2025

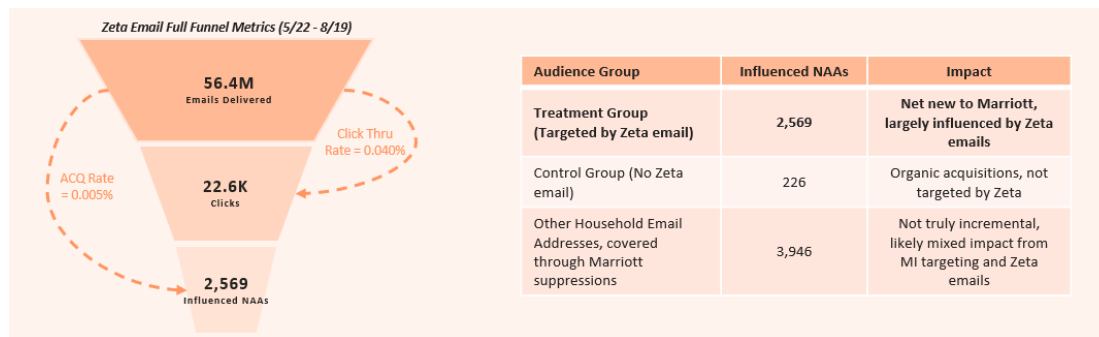

Chase Boundless | ACQ Email

OBJECTIVES

- Drive incremental NAAs leveraging Marriott/Zeta data cleanroom to identify US customers that are outside MI ecosystem/target audience.

ANALYSIS RESULTS

- The campaign influenced* 2.5K NAAs demonstrating strong effectiveness and incrementality from their primary treatment group constituting new-to-Marriott customers who were targeted exclusively through Zeta emails.
- Per Zeta, there were 4.1K additional NAAs resulting from customers contacted by Zeta through an alternative or household email address already included in the MI ecosystem and being used in Marriott cobrand targeting campaigns.

1. NAA count includes all five cobrand cards (inclusive Bold X-sell from Chase Dual LP)
2. RAF AJO/SMB NAA is pending due to the tracking of Bank report

2024 Completed Global Cobrand ACQ Initiatives Summary

In 2024, we ran 25+ global cobrand card acquisition test & learn initiatives across MI web, app and email channels (outside of broadscale LTO & BAU offers), resulting in 11 winning outcomes, which have since been rolled out in their respective channels. Additionally, we directly deployed 15+ initiatives across MI channels, of which Property Wi-Fi Modal and AJO App Home Screen Takeover were new launches with successful outcomes.
